

Speedometer for Forklift

Opcional:
Pantalla repetidora externa

DEVELOPED
BY ACR

The forklift speedometer provides greater safety when maneuvering, it not only provides the operator with real-time information about the forklift's speed through a display, but is capable of generating alerts and reports.

This solution helps prevent accidents, such as collisions (vehicles/pedestrians) and fork breakages among others, by allowing constant monitoring of the forklift's operating conditions. Furthermore, integration with Management allows a detailed analysis of driving, enabling the optimization of high-traffic areas and preventive maintenance, increasing productivity.

Benefits

- Accurate speed measurement
- Easy-to-read visual indication, even from long distances
- External repeater display implementation option
- Programmable alarm outputs
- Pre-alert and visual and audible speed limit alert
- Totally safe system against sabotage

Technical Characteristics

Power supply	24Vdc
Consumption	1A
Speed Range	0 A 30 km/h
Resolution	1 km/h
Degree of Protection	IP65
Programmable alarm outputs	2 Gnd

Applications
